- Includes SwimStep access platform accessory
- Constructed of heavily-reinforced, high-quality [Duratex](#) material with HA Weld seams
- Lifetime warranty covers any and all manufacturing defects

Product Description

Product Description Enjoy an exciting day on the water with the Aquaglide [Platinum](#) SuperTramp Water Trampoline, a floating playground for all ages. Designed for outstanding bounce and durability, each SuperTramp incorporates an eight-sided Octane frame and six-inch powder-coated springs to support a large ten-foot bounce surface and provide superior bounce (an optional Stainless spring kit is available for salt water environments). Each trampoline comes complete with a SwimStep access platform (which attaches using the integrated Interloc system), heavy-duty boarding and transport handles, and anchor bridle. A wide selection of additional accessories is sold separately to customize your own unique aquapark via the Interloc system. Specifications: Octane: Eight-sided Octane trampolines allow a larger sweet spot because the springs pull in different ways. While some springs pull directly to the center, others create an overlapping web of Octane power. This overlap produces a vastly superior bounce over a larger surface area--Octane trampolines offer 10% more jump surface than the same size round frame. More space, more value, and more fun. Duratex: Duratex material is commercial-grade, fabric-reinforced PVC. Each Aquaglide Platinum item uses [Duratex](#) material for strength and durability, and the Rebound incorporates 500d fabric fused with layers of 28 oz PVC. Interloc: Aquaglide Platinum items connect to one another using the

Interloc system. Soft webbing offers flexibility while remaining tough, blending the convenience of a cinch with the security of a locking connection. SwimStep: The access platform is a convenient way to board the aquapark and adds space to each [Platinum](#) item. Incorporates heavy-duty molded boarding handles and connects to the Rebound using the Interloc system. UV Block: Ultraviolet (UV) damage is typically the biggest culprit in shortening the life of commercial watersports products. Consequently, each Aquaglide Platinum item is treated with UV Block, the highest grade three-year UV coating available. HA Weld: Hot Air (HA) welding is the process used to fuse DuraTex material seams. HA welding produces clean, strong seams with no unsightly glue marks or splits. UP Grip: The SuperTramp includes two convenient climbing handles allow for boarding and/or climbing while staying out of the way for other activities. Manufacturer's [Warranty](#)

Lifetime warranty: each SuperTramp offers a lifetime warranty covering any and all manufacturing defects for recreational use.
